

Mentor Text (Cause-Effect) Explanation

People who live near rivers in Cambodia use fishing nets because fish are an important food source. Fishing nets help people catch many fish at one time. This adaptation allows families to get enough food from the river.

Mentor text (Compare & Contrast)

Both river fishing in Cambodia and rice farming in China help people get food from their environment. However, fishing uses rivers while rice farming uses land. These adaptations show how people change their practices to match where they live.
